

POLYMOUNT SELF-ADHESIVE SLEEVE QUICK AND EASY PLATE MOUNTING

POLYMOUNT INTRODUCES A NEW SELF-ADHESIVE FLEXO SLEEVE

Our world is constantly evolving and this challenges us to stay competitive and be sustainable at the same time. Polymount's self-adhesive print sleeves do not require expensive tape to mount printing plates. By simply cleaning the surface of the sleeve the adhesion is re-activated and it can be used to mount plates over and over again. A proven concept which not only offers you a sustainable solution but also provides a significant cost and waste saving. You can combine sustainability with lower costs and less waste! A win-win-win situation!

3 DIFFERENT DENSITIES

The Polymount sleeve is available in three different densities, soft, medium, and hard. Each density has its own qualities.

SOFT The softer version is a white coloured sleeve and is often used by packaging manufacturers to produce high quality vignettes on film. The soft version offers less bounce, often resulting in higher press speeds. The soft version is gaining in popularity.

MEDIUM The Medium density sleeve is orange in colour and is our most popular and versatile sleeve. The medium sleeve offers high quality printing for fine screens, lines and solids simultaneously. The paper and board industry as well as aluminium foil UV ink printers are predominantly running this type of sleeve.

HARD To complete the range on offer we have the harder sleeve, which is black. This sleeve will bring you the extra ink coverage you may be looking for.

-  Polymount eliminates the need for sticky back
-  Efficiency increase in the mounting department; time savings up to 40%
-  Consistent print results
-  Permanent adhesion & compressibility
-  Improves your Carbon Footprint
-  Quick ROI after 25 times of usage
-  Sustainable, less waste

QUALITY, SERVICE AND FAIR PRICING

Quality, Service and fair-Pricing are our top priorities, which we offer to every self-adhesive sleeve user. Our production is fully automated and our commitment to quality-control ensures a consistent product for every customer.

Our Service is based on technical know-how and customer support provided by full time specialists. We will go the extra mile to fulfil your requirements. Our Pricing is transparent and competitive which makes it easy to calculate your ROI.

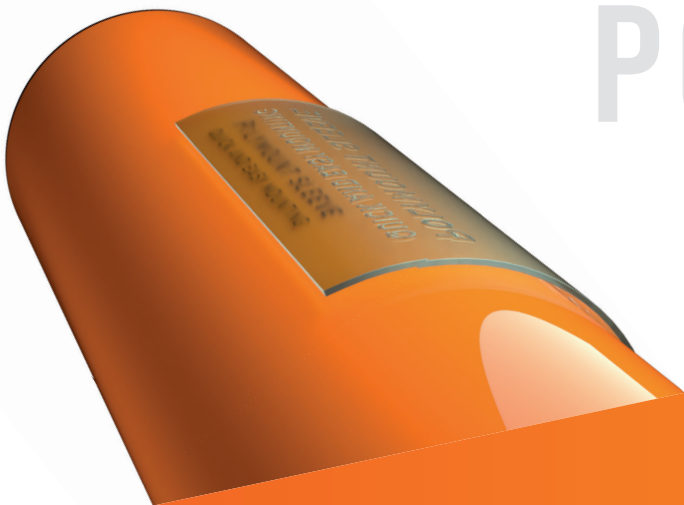

A VERY SUSTAINABLE AND CLEAN SOLUTION

It is our goal to deliver the best quality self-adhesive sleeve to the flexo industry. We strongly believe that our sustainable plate mounting solution should be used by every flexo printer who cares about their people and the World we live in. The Polymount sleeve reduces waste and helps produce more profit for your business, and you will no longer have to buy expensive adhesive tape to mount your printing plates. Why buy and waste tape if you don't have to? Use Self adhesive sleeves from Polymount!

10 YEAR GUARANTEE ON THE PERFORMANCE

Polymount sleeves are built to last! We offer you a guarantee of ten years for the adhesion and the compressibility of our sleeves! We are happy and proud to offer this ten-year guarantee as we know the product better than anyone else. The Polyurethane foam underneath the sticky layer is manufactured using open cell technology, which will not wear out nor show ghosting in the print, no matter how long the run. The sticky layer is made of an extremely stable polymer that simply does not change its structure. This polymer is specifically designed to be adhesive and will hold a plate more than 10 years.
