We are Proud to Introduce our New ... Phoenix Series

The **Phoenix Series** has been developed based upon your needs and include the following enhancements:

- **Safer level of ultrasonics** – 68 kHz – to allow smaller bubbles to get into the smaller cells of the higher line count rolls.
- **Modified power generators** – Now external, interchangeable and easily replaceable.
- **Safer heating system** – Increased reliability with fixed thermostat settings and low level automatic shut off.
- **Longer lasting equipment** – Enhanced with replaceable ultrasonic transducers as well as timing pulleys with bearings.
- **Standard size equipment configuration** – to coincide with our past systems.

The PX-202 is capable of cleaning 1 or 2 anilox rolls up to 18" (460mm).

Wide Web systems can be customized to clean rolls up to 10 feet (3 meters)

- **Fully customizable sizes** – to coincide with larger sleeves and anilox rolls. No anilox is too large for Sonic Solutions – from 3 inches to 10 feet – from 1 roll to 8 rolls at a time - we can **economically** make a system to fit your needs.
